EXPERIMENT- 09

Student Name : Shubh Rai

UID : 23BCS12916

Branch: BE-CSE

Section/Group: KRG 3B

Semester: 05

Date of Performance: 30/10/25

Subject Name: ADBMS

Subject Code: 23CSP-333

1. Aim: To create and connect a PostgreSQL database instance on **Amazon RDS**
(Relational Database Service)

2. Objective:

- To understand the steps involved in launching a database instance using Amazon RDS.
- To configure a database for public access and connect it with a local client (pgAdmin).
- To perform basic SQL operations (CREATE, INSERT, SELECT).

3. Tools / Software

- Amazon Web Services (AWS)
- PostgreSQL
- pgAdmin 4
- RDS (Relational Database Service)

4. Program:

Step 1: Create and Configure Database Instance

1. Login to AWS Console → RDS → Create database, select Standard create and PostgreSQL under the Free Tier template.
2. Set DB identifier: ruchi-db, Username: postgres, choose db.t3.micro, 20 GB gp2 storage, and enable Public access.

3. Click Create database and wait until the status shows Available in the RDS dashboard.

Step 2: Configure Security Group (Allow Local Access Only)

1. In AWS Console → go to RDS → Databases → click your DB (ruchi-db).
2. Open the Connectivity & Security tab.
3. Under VPC security groups, click the linked group name (it opens EC2 security groups).
4. Click Edit inbound rules → Add rule
 - Type: PostgreSQL
 - Protocol: TCP
 - Port: 5432 • Source: My IP

5. Click Save rules.

The screenshot shows the AWS RDS VPC Security Groups Inbound Rules table for a security group named 'sg-0570f959421927738 - default'. The table has two rows of data:

Name	Security group rule ID	IP version	Type	Protocol	Port range	Source
-	sgr-0d39d1bf593210da4	IPv4	PostgreSQL	TCP	5432	106.206.235.43, sg-0570f95942
-	sgr-0ee4f18536cb88772	-	All traffic	All	All	sg-0570f95942

Step 3: Connect Database Using pgAdmin

1. Open pgAdmin 4 on your local system.
2. Right-click Servers → Create → Server.

3. Under the General tab, enter the name: **postgre**.
4. Under the Connection tab, fill in the following details:
 - Host name/address: **ruchi-db.xxxxxxx.rds.amazonaws.com**
 - Port: **5432**
 - Username: **postgre**
 - Check Save password.
5. Click **Save** to connect your RDS PostgreSQL database.
